

# Cyber Essentials Datasheet

## Mitigating Your Reputational Risks

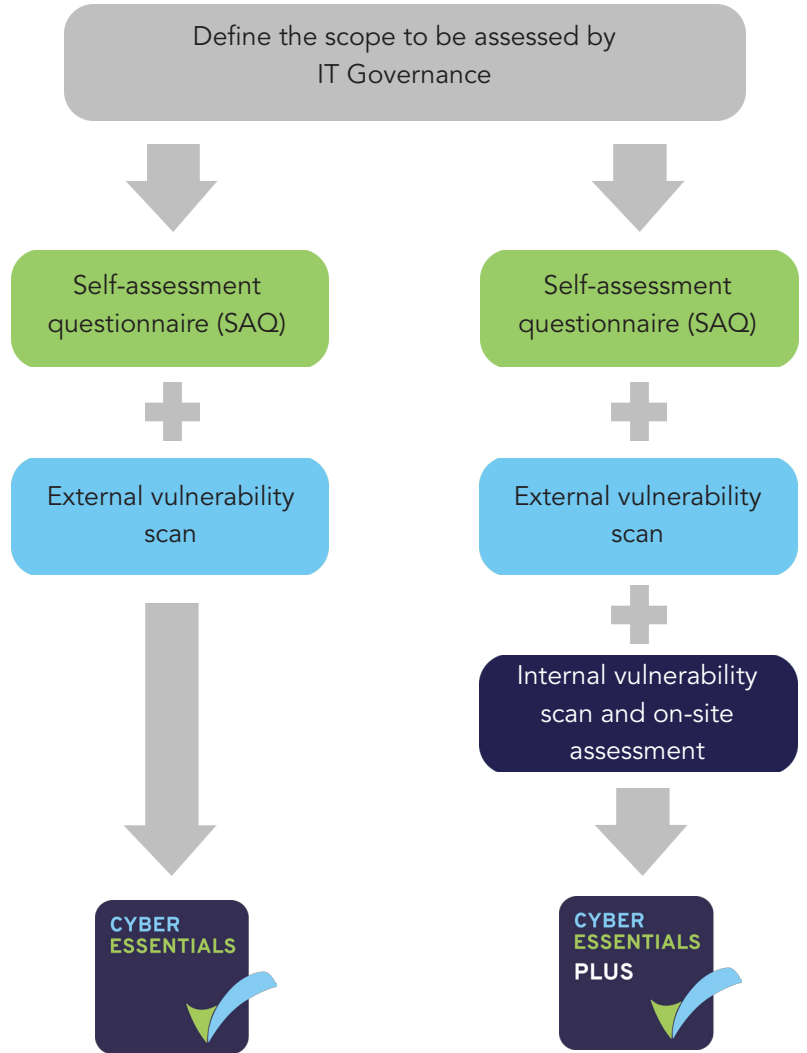

### Overview

Cyber Essentials is a cyber security certification scheme that was developed as part of the UK government's National Cyber Security Strategy. It provides a clear statement of the basic controls that all Third Sector Organisations should implement to mitigate the risk from common cyber threats.

### The five controls

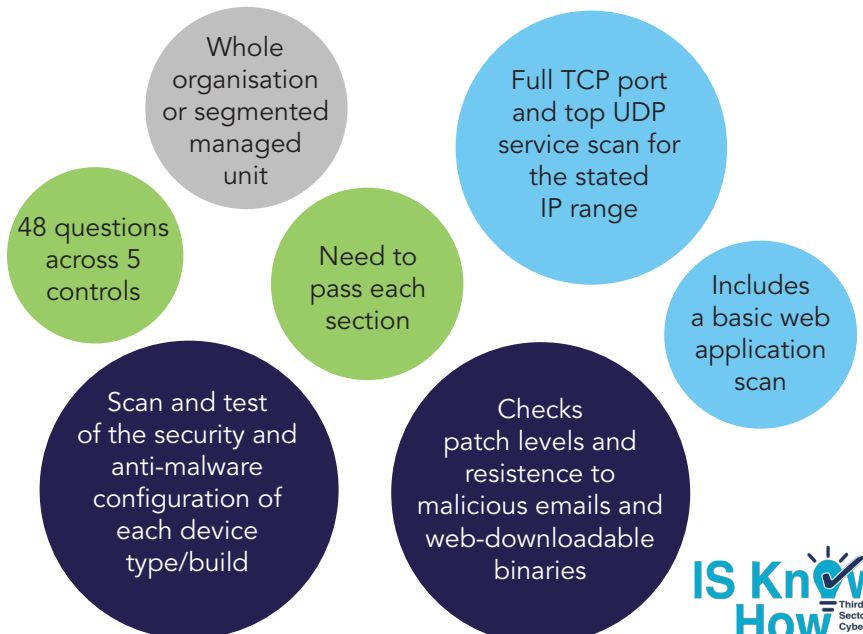

### The two levels of CREST certification

### Benefits of Cyber Essentials

### Key information about the certification stages

# Cyber Essentials

## Why choose IT Governance

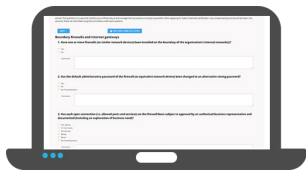

- Experienced CREST-accredited certification body, with over 400 companies certified and many more undergoing assessment.
- Manages the entire certification process online. This makes communications, booking of tests, filling in the SAQ, and the renewal process easy.
- Provides all of the tools and resources needed to achieve CREST-accredited certification at both levels of the Cyber Essentials scheme.
- Delivers all of the technical tests and assessments conducted by experienced CREST-accredited testers.
- Has six packaged solutions available to support companies with varying levels of experience through the Cyber Essentials or Cyber Essentials Plus certification process.

## Important information

- It is recommended to renew certification after one year as the tests are only against a moment in time.
- If a company wishes to upgrade from CE to CE+ within their certification period they will have to go through the whole test process again. This is because tests are only against a moment in time.
- All tests and the submission of the SAQ must be completed within 14 days of each other. This includes any retests.
- If a company has issues to remediate, retests may identify new issues.
- On-site consultancy can be split between on-site and off-site. Additional consultancy support can be bought by the hour, half day or full day.
- 16 IP addresses are included within the package price.
- Customers will receive their report within 10 days of passing.

## Selecting the appropriate solutions package

Do It Yourself

- Has IT security experience
- Knowledge of the five controls
- Capable of implementing the five controls
- Knows IP range and scope

Get A Little Help

- Has some IT security experience
- Has some knowledge of the five controls
- Does not understand all of the SAQ
- Not sure on scope

Get A Lot Of Help

- Has little or no IT security experience
- Has little or no knowledge of the five controls
- Complex organisational structure
- Does not know IP range or scope
